Summary

Software Developer with 4.5 years of experience in developing firmware and optimizing performance for industry-leading NAND Flash memory products for SAMSUNG. Expertise in NVMe and UFS protocols, SSD performance analysis for DRAM SSDs, and full-stack understanding of device firmware architectures.

Skills

- **AI & Functional Programming:** Claude Code, llama.cpp (On-Device LLM Inference), Lisp, Racket.
- **Languages:** C/C++, Python.
- **Tools & Technologies:** Lauterbach TRACE32, ARM Toolchain.
- **Domain Knowledge:** Software Design and Architecture, Data Structures and Algorithms.

Work Experience

Samsung Semiconductor India Research (SSIR), Bangalore

Associate Staff Engineer | Performance Engineering

JAN 2026 – PRESENT

- Serve on a specialized SSD performance improvement task force, prioritizing critical performance metrics for the team.
- Improve AI workload performance of Samsung DRAM SSDs on the NVIDIA DGX platform.
- Conduct complex performance analysis using Discrete Event Simulation.

Associate Staff Engineer | Client DRAM SSD Firmware

JUL 2025 – DEC 2025

- Provided critical on-site support in South Korea for a DRAM SSD Firmware holiday release.
- Rapidly onboarded and mastered the current-generation Samsung DRAM SSD Controller, focusing heavily on performance enhancement features.

Associate Staff Engineer | UFS Nintendo Firmware

JAN 2025 – JUN 2025

- Analyzed customer requirements and delivered tailored firmware solutions to achieve target specifications.
- Implemented a custom Patrol Read error-prevention algorithm to ensure long-term data integrity.
- Gained expert-level proficiency in the Flash Translation Layer (FTL) and Flash Interface Layer (FIL).

Senior Software Developer | Portable SSD Firmware

DEC 2023 – NOV 2024

- Implemented a software framework for porting NVMe SSD firmware to USB-based Portable SSDs.
- Applied Design Patterns and SOLID design principles to achieve industry-standard quality attributes.

Senior Software Engineer | UFS Firmware

JUN 2022 – NOV 2023

- Primarily contributed to UFS Firmware development with a strong focus on the Host Interface Layer (HIL).
- Developed a tool to automate Trace32-based debugging workflows.
- Engineered features including Dynamic Thermal Throttling, Half Buffer GC, and Low Voltage Detection.

Education

-
- **MTech in Smart Manufacturing**, Indian Institute of Science (IISc), Bangalore (2020–2022) | GPA: 8.3/10
 - **BTech in Electronics**, Walchand College of Engineering, Sangli (2015–2019) | GPA: 7.03/10

Projects

-
- **Master's Project:** Serial communication-based Debugger (similar to JTAG) for Tiva4C ARM Cortex M microcontroller.
 - **Bachelor's Project:** Software Emulator (Python) and Verilog HDL for a simple RISC Instruction Set Architecture (ISA).
